INFORMATION

SieMatic Front Cleaner

Notes on the SieMatic front cleaner

The SieMatic front cleaner will help you maintain your kitchen in optimal condition and let you enjoy it for many years.

SieMatic front cleaner

The front cleaner is suitable for matt, velvet-matt, glossy and high-gloss surfaces and can be used on laminate, lacquer, veneer and ceramic fronts. It detaches the dirt and makes it easy to remove.

Also take the safety information and manufacturer's information into account.

Micro-fibre cloth

The SieMatic micro-fibre cloth is perfect for cleaning your kitchen. Please only use clean micro-fibre cloths to avoid scratches caused by dirt particles. The cloth can be washed at 60°C - 90°C without fabric softener. When using other micro-fibre cloths, please make sure that they are suitable for your kitchen. Overlock stitches, attached labels and rough fibres can create micro-scratches in fronts.

How to use

Spray product generously onto a damp cloth or non-abrasive sponge and apply to the surface. For hard-to-remove dirt, rub with light pressure to support the cleaning process. After several seconds, remove product with clear water (e.g. on rinsed cloth/sponge) and wipe the surface dry.

Attention! When using the product, please note the following:

- Prevent foam/liquids from running down surfaces
- Do not use other cleaning agents together with the front cleaner
- Do not use the front cleaner on aluminium fronts or anodised handles
